## 1 Foreword

The City of Edinburgh Council is committed to providing a safe and modern road network for the 21<sup>st</sup> Century.

Building on the Scottish Government's Road Safety Framework ¹and the Council's Transport 2030 Vision ²and Single Outcome Agreement³, the Council and its Partners developed this Road Safety Plan for Edinburgh to 2020, as a focus for all road safety activity in the city.

At the core of the plan is the Vision that the Council and its Partners will:

Work towards Vision Zero and the provision of a modern road network where all users are safe from the risk of being killed or seriously injured

Developed by Dr Tingvall<sup>4</sup> in Sweden, Vision Zero is based on the premise that human life cannot be balanced against cost.

<sup>1</sup> Scotland's Road Safety Framework to 2020

 $^2$  The City of Edinburgh Council's Transport 2030 Vision

<sup>3</sup> The City of Edinburgh Council's Single Outcome Agreement 2008-11

<sup>4</sup> Vision Zero (1999) - An ethical approach to safety and mobility. Claes Tingvall and Narelle Haworth Monash University Accident Research Centre While the cost of implementing a policy with such wide ranging implications may appear to be unaffordable, significant savings are achievable.

The 2006 Department for Transport report titled Vision Zero: Adopting a Target of Zero for Road Traffic Fatalities and Serious Injuries, noted that the UK economy as a whole would receive "a 10-year stream of benefits that can be valued at £,111 billion" from the implementation of Vision Zero.

The Council is actively working towards Vision Zero and a significant step forward has been taken with the publication of this Road Safety Plan.

Providing the people of Edinburgh with value for money has always been a key driver for the Council. In the current financial climate the Road Safety Plan's challenging Vision will be achieved through the Council working with its Partners to ensure the effective targeting of limited resources.

The Council and its Partners have worked together to develop the Plan, ensuring it will act as a focus for all road safety activity in Edinburgh through a series of interventions.

These high level commitments by the Council and its Partners will target resources where they

will have the greatest impact on the number of people killed or seriously injured on Edinburgh's roads. The issue of social and geographical inequality across the city is a focus of many of the Plan's interventions.

The Plan will only retain its relevance and effectiveness if it is regularly updated. On an annual basis the previous year's casualty figures will be analysed to identify trends and patterns.

A major review of the plan will be carried out bi-annually. Such reviews will measure progress on the interventions, and ensure the plan reflects current Government and Council policies, as well as the prevailing economic conditions.

Personal statement from Councillor Mackenzie

Personal statement from Marshall Poulton

# 2 Objectives and Key Priorities

The objectives were developed by the Council and its Partners to ensure only those interventions actively contributing to Edinburgh's road safety vision were included in the Plan.

The following provides a brief summary of the nine objectives used to assess interventions for inclusion in the Plan, as outlined in Appendix A.

**Data Management / Analysis -** Data to be managed, analysed and based on auditable information rather than on perceived issues.

**Healthy / Active Travel -** The development of active travel and healthier living will be encouraged and promoted, especially in areas of social deprivation.

**Network Management -** Develop and maintain a modern and safe road network for the 21<sup>st</sup> Century.

**Partnership Working -** New partnerships will be formed, and existing partnerships developed, to ensure efficient delivery.

**Publicity / Promotion -** New and existing publicity campaigns will be used to encourage the safe and efficient use of the road network.

**Speed Management** - Vehicle speeds will be managed to reduce the potential for collisions as well as their severity.

**Technology** - The use of new and improved technology will contribute towards road safety improvements.

**Tram -** Contribute to the safe and efficient running of, and interaction with, the Tram.

**User Behaviour -** Road safety on the road network will be improved through sensible behaviours of road users.

Edinburgh's key priorities were identified from both a detailed analysis of the 2004 – 2008 casualty data and consultation with the Council's Partners and other stakeholders including user groups, to ensure the interventions target those most at risk of being killed or seriously injured on Edinburgh's roads.

### Children and Young People

An analysis of the latest available casualty data (2008) shows a 56% reduction in the number of children killed or seriously injured on Edinburgh's roads since 2000.

Despite this success children remain particularly vulnerable to injury due to their lack of experience, their potential for impulsiveness, and the ease with which they can become distracted.

The continued reduction in the number of children killed or seriously injured on Scotland's roads is also a key element of the Scottish Government's Road Safety Framework.

### **Cyclists**

Between 2004 and 2008 139 cyclists were killed or seriously injured on Edinburgh's roads. When compared to the 130 car drivers and 128 motorcycle riders killed or seriously injured over the same period, it shows the vulnerability of cyclists.

#### Drivers

22% of all people killed or seriously injured and 42% of all casualties between 2004 and 2008 were car drivers or passengers.

Analysis of data indicates that car drivers are more likely to be killed or seriously injured due to speeding and inappropriate driver behaviour than from any other cause.

### **Elderly People**

While those aged 60 and over account for 19% of the population of Edinburgh, it is considered likely that the percentage of those in this age group who actively use the road network is significantly lower.

Nevertheless with 18% of all those killed or seriously injured falling into this age group it can be seen that the elderly are at particular risk.

### Impairment

The Council is dedicated to addressing the difficulties experienced by those with mobility impairment who use the road network.

This existing commitment has been given particular focus through the Disability Discrimination Act 2005.

#### Infrastructure

The provision of a modern and efficient road network for the 21st century will allow its use safe from the risk of being killed or seriously injured.

### Motorcyclists

There were 128 motorcyclists killed or seriously injured between 2004 and 2008 on Edinburgh's Roads. The vulnerability of motorcyclists is clearly shown when this is compared with the number of car drivers killed or serious injured (130) between 2004 and 2008.

#### **Pedestrians**

Pedestrians account for 42% of all those killed or seriously injured but only 23% of all injury incidents on Edinburgh's roads between 2004 and 2008.

This disparity between those killed and seriously injured and all injury incidents highlights the particular vulnerability of pedestrians.

### Speed

Research <sup>5</sup>has shown that where a pedestrian is struck by a car travelling at 20mph, over 9 out of 10 people will survive. However, if a pedestrian is struck by a car travelling at 30mph 8 out of 10 people will be killed while 9 out of 10 people will be killed if the car is travelling at 40mph.

<sup>&</sup>lt;sup>5</sup> New Directions in Speed Management: A Review of Policy, DETR, 2000

#### Tram

The introduction of the Tram and the amendments to Edinburgh's road network will radically change the traffic patterns in the city. It is essential that any such changes are harnessed so as to contribute towards meeting Edinburgh's road safety vision.

#### Vehicles

The road worthiness of a vehicle can be a major contributory factor towards the likelihood of the vehicle being involved in a collision, while the level of protection offered by the vehicle can reduce the severity of any injuries.

Evolving technology now offers the potential for reducing the likelihood of a collision occurring.

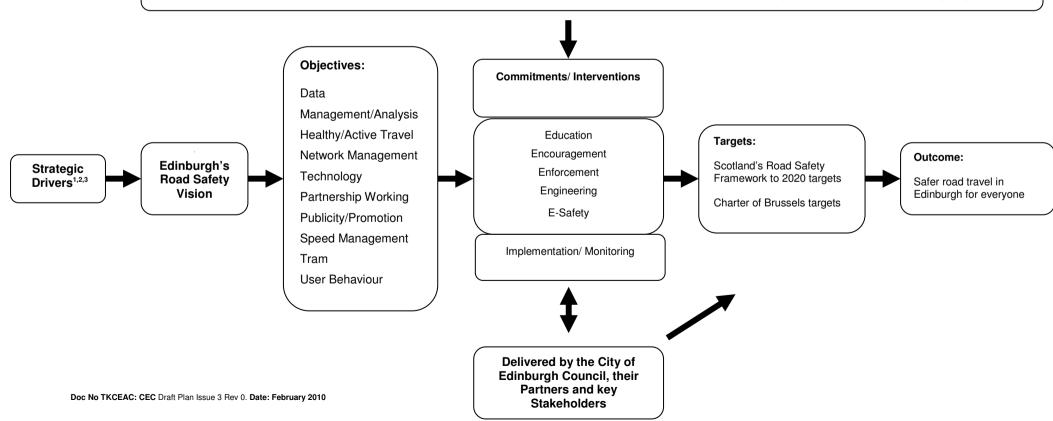

## Working Together

By working together the Council and its Partners will be able to target their limited resources to where they will have the greatest impact.

The interactions of the Vision, Objectives and Key Priorities and their contribution towards the development of the Interventions and the delivery of safer road travel in Edinburgh for everyone is summarised below:

### **Key Priorities:**

Children and Young People; Cyclists; Drivers; Elderly People; Impairment; Infrastructure; Motorcyclists; Pedestrians; Speed; Tram; Vehicles; Working Together

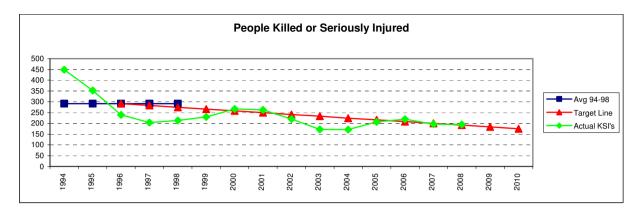

## 3 Existing 2010 Targets

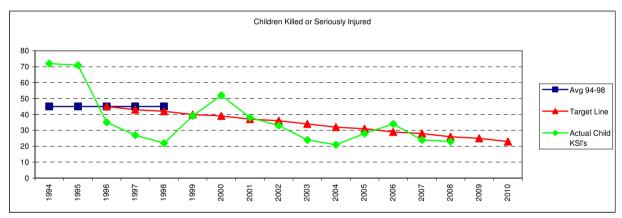

The current Road Safety Plan contains a series of targets for the reduction of casualties by 2010:

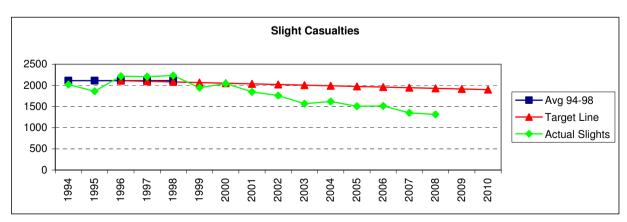

- Reduce by 40% the number of people killed or seriously injured in road accidents;
- Reduce by 50% the number of children killed or seriously injured;
- Reduce by 10% the slight casualty rates;
- Reduce by 50% the number of cyclist casualties per km travelled;
- Reduce by 40% the number of pedestrian casualties per km travelled.

Data is not currently available to allow casualty rates to be calculated on a km travelled basis.

The graphs shown compare the above targets with the actual casualty rates. If current trends are maintained, it is expected the first three measurable targets shown above will be met.

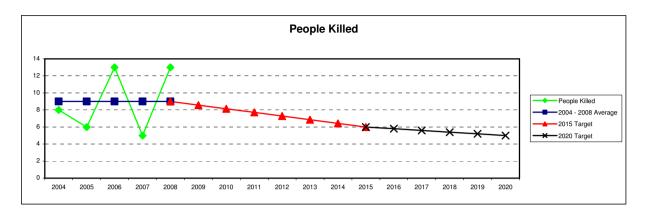

## 4 New 2020 Targets

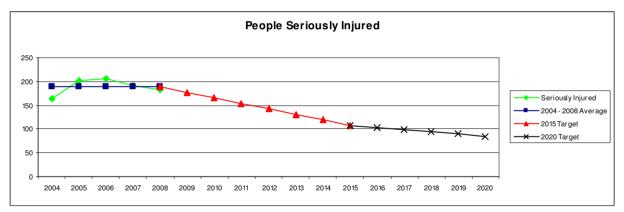

Significant investment has been made in road safety, resulting in a 15.8% decrease in all casualties in Edinburgh between 2004 (1,792) and 2008 (1,509).

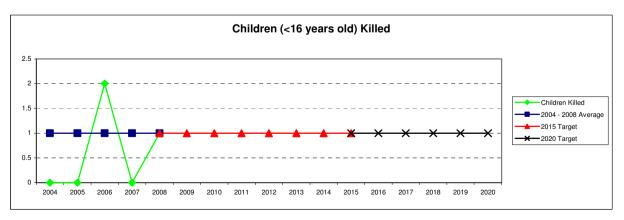

Ensuring this significant reduction in overall casualty numbers continues, the Council has adopted the challenging targets contained in the Scottish Government's Road Safety Framework.

	% Rec	duction
Target	2015	2020
People Killed	30	40
People Seriously Injured	43	55
Children (<16) Killed	35	50
Children (<16) Seriously	50	65
Injured		
People Slightly Injured	5	10
Cyclists Killed		50

In addition to the above targets, the Council signed up to the Charter of Brussels in 2009. The Charter of Brussels sets a modal target of at least 15% of all journeys to be made by bicycle by 2020. During this same period, the level of cycle fatalities should drop by 50% or more.

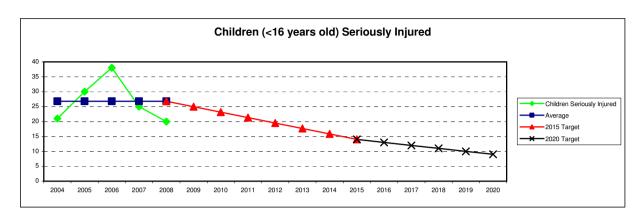

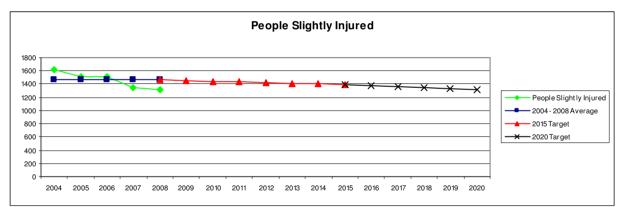

The previous graphs, as well as those opposite, compare the Scottish Framework targets with Edinburgh's casualty rates.

Due to the already low number of people killed on Edinburgh's roads, it is not possible, at this time, to make an assessment of the likelihood of achieving the targets for reducing fatalities.

If current trends are maintained, it is anticipated that the targets (reduced numbers of, people seriously injured, children seriously injured, and people slighty injured) will be met.

## 5 Working Together

Through partnership working, the Council will deliver safer road travel in Edinburgh for everyone.

To this end, the development of the plan was guided by a Project Board, Steering Group and feedback from various consultation events.

### Road Safety Plan Board

The Project Board consisted of representatives from:

- The City of Edinburgh Council (Transport and Children and Families);
- NHS Lothian;
- Lothian & Borders Police; and
- Halcrow Group Ltd.

The Board guided the development of the Plan and authorised its publication.

### Road Safety Plan Steering Group

The Steering Group brought together representatives from the Key Stakeholders ensuring the Plan addressed the concerns of a variety of interest groups.

The Group was made up of representatives from:

- The City of Edinburgh Council (Transport, Children and Families, Corporate Communications, Planning, and Services for Communities);
- Lothian & Borders Police (Road Policing, Road Safety, Education);
- Lothian & Borders Fire and Rescue Service
- NHS Lothian, and
- Halcrow Group Ltd.

## Consultation Workshop

A workshop was held on 5 November 2009 to obtain the views of those Stakeholders who were not part of the Project Board or Steering Group.

After a presentation on the analysis of the casualty data from 2004 – 2008 the Stakeholders were invited to develop a series of interventions for possible inclusion in the Plan.

Representatives from the following organisations attended the workshop:

- City of Edinburgh Council Children and Families;
- NHS Lothian;
- City of Edinburgh Council Transport;
- Safety Camera Partnership;
- Lothian Buses;
- Central Taxis;
- City for All Ages;
- Cyclist Touring Club;
- Lothian & Borders Police;
- City of Edinburgh Council Services for Communities;
- Older Peoples Forum;
- Living Streets;
- Cycle Touring Club;
- Halcrow Group Ltd;
- First Edinburgh;
- Edinburgh Chamber of Commerce;
- Young Peoples Council;
- Road Haulage Association;
- Lothian and Borders Fire Service;
- Spokes; and
- Edinburgh World Heritage Trust.

### **Cycle Consultation Event**

On 10 November 2009 a presentation and discussion was held between the Council and the Edinburgh Cycle Forum. This event proved very useful in-terms of understanding the views of experienced cyclists in Edinburgh, and establishing what they would like to see included in the developing Road Safety Plan.

#### **School Consultation Event**

This interactive event was held on 4 December 2009, and comprised of 18 s1-s6 pupils from various high schools across Edinburgh discussing road safety education. Topics covered how best to target messages to school children, as well as what elements of road safety concerned them the most.

## 6 Interventions

A long list of interventions was developed based on the analysis of the 2004 – 2008 casualty data, consultation with the Project Board and Steering Group as well as feedback from consultation events held to obtain the views of wider stakeholder groups. The anticipated timescale for implementing each of the interventions has been indicated as short (2011 - 2012), medium (2013 - 2015) and long (2016 - 2020) term.

The interventions were scored against the criteria outlined in Appendix A to identify the refined list of Interventions for inclusion in the Plan.

Each intervention has been allocated an 'Owner'. While responsibility for the implementation of an intervention will not rest solely with the owner, assigning ownership will ensure interventions are developed, and progress is reported to the Road Safety working group.

Child	ren and Young People		ation	Encouragen	ety	Enforcemen	Engineering			
Ref.	Intervention	Key Stakeholders	Educa	Encol	E-Safety	Enfor	Engin	Short Term	Medium Term	Long Term
YP1	Education - Road Safety Scotland resources adopted as a core programme from nursery to S6, supplemented by contextual learning and the new curriculum with support from partners, and reinforced by council policy updates. Department For Transport and other free resources to be effectively and equally distributed through schools and to parents. Where resources are limited, schools in deprived areas should be prioritised.	Owner: CEC Children & Families. Fire and Rescue Service, NHS Lothian, CEC Services for Communities.

## Appendix A – Scoring System

To determine which intervention best supported the Road Safety Plan's Vision they were scored against the following criteria. Only those that received a total score of 3 or more have been included in the Plan.

### A - Contribution to Vision/Objectives

#### Score Criteria

- 1 Zero or one Objective met
- 2 Two to three Objectives met
- 3 Four to five Objectives met
- 4 Six to seven Objectives met
- 5 Eight to nine Objectives met

### B - Delivery Mechanism

#### Score Criteria

- 1 Complex delivery arrangements using untried relationships.
- 2 Delivery arrangement through untried relationship
- 3 Previously tested delivery arrangements through newly formed relationships
- 4 Established delivery arrangements through single party or existing relationships
- 5 Routine delivery arrangements through single party or well established relationships.

### C - Cost vs. Value

### Score Criteria

- 1 Cost of measure potentially exceeds anticipated value return.
- 2 Cost of measure is slightly greater than anticipated value return.
- 3 Cost of measure is approximately equal to anticipated value return.
- 4 Cost of measure is slightly less than anticipated value return.
- 5 Cost of measure is significantly less than anticipated value return.

## D - Resources and Capability

### Score Criteria

- 1 Resources may be difficult to obtain or technology may not yet be available.
- 2 Resources may be available or uses emerging technology.
- 3 Resources are available or it uses developed technology.
- 4 Both resources and developed technology are readily available.
- 5 Both resources and technology are currently in use and successful.

### E – Assessment of Likely Impact

### Score Criteria

- 1 Measure will have no positive impact on reducing the number casualties.
- 2 Measure will have a limited positive impact on reducing the number casualties.
- 3 Measure likely to succeed and directly impact on reducing the number casualties.
- 4 Measure is tried and tested with positive history of casualty reduction.
- 5 Measure is tried and tested with positive history of high casualty reduction.

As the Road Safety Plan is a strategic document it was determined that contribution to the Vision/Objectives was the most significant of the scoring criteria. The following weighting was applied:

 Criteria
 A
 B
 C
 D
 E
